Subject Index

BR= Book Review
L = Letter
LF = Literature Focus article

A

abscisic acid,
  biosynthetic pathway (LF) 332
  ferretin synthesis 187–193
  guard cells 339–345
  root-to-shoot transport 22–28
  seed development 447–448
  seed dormancy 384–389
  seed germination 464–469
  water stress 48–54
ablation techniques 106–111
Acacias,
  ant mutualism 408–409
ACC oxidase,
  root to shoot transport 22–28
actin,
  cytoskeleton-based motor proteins 86–91
  molecular motors 29–37
  depolymerization 275–281
active transport,
  phloem loading 285–286
Agrobacterium,
  cytokinin metabolism 351–356
  gene transfer (BR) 321–322
agrochemicals,
  pesticide resistance (BR) 486–487
air pollution,
  plant responses (BR) 117
alcohol dehydrogenase,
  complex genes in pine 356–359
alternative oxidase,
  cytochrome pathway 289–290
amino acids,
  shikimate pathway 346–351
amplicon constructs 409–411
amylase 255–261
anatomy,
  atlas of structure (BR) 200
  grasses (BR) 201–202
  wood structure 3–4
annexins,
  peroxidase-like activity (LF) 6
antheridiogen,
  sex determination in ferns 175–180
anthocyanins,
  free-radical scavenging 7–8
antioxidants,
  phenolic compounds 152–159
aphids,
  viral transmission (LF) 123
apical dominance,
  cytokinins and auxin 351–356
appressorium formation,
  a role for cyclic AMP 193–199
aquaporins,
  membrane permeability (LF) 370
  osmotic flux (LF) 288
  self-incompatibility 328–329
Arabidopsis genome,
  sequencing technology 71–74
arbuscular mycorrhiza,
  phosphate transport 2–3
  symbiosis-defective mutants 371–372
  symbiosis 54–60
arginine decarboxylase,
  polyamine biosynthesis 124–130
aromatic amino acids,
  shikimate pathway 346–351
aspirin,
  salicylic acid 266–274
asymmetry,
  flower development (LF) 6–7
  root development 1–2
ATPase activity,
  Hsc70 proteins 180–187
automated sequencing 71–74
auxin,
  cell determination in lateral roots 390–396
  interaction with cytokinin 351–356
  response elements (LF) 370
  transport 251–255
avirulence genes 204–206

B

bacterial avirulence genes 452–458
bacterial disease,
  Xanthomonas pathogenicity genes 204–206
bioinformatics,
  genome analysis (BR) 238–239
biometals 451
biosynthesis,
  glucosinolates 425–431
  phenolic compounds and methyl transferases 249–250
biotechnology,
  agrochemicals (BR) 486–487
  biochemistry and molecular biology 45
  commercial products (BR) 116–117
  hemoglobin expression (LF) 166
  hydroxamic acids 449–450
  research in Taiwan 360–362
  silencing of transgenes and endogenous genes 438–443
  somoclonal variation (BR) 38
  viral induced gene silencing 409–411
biotic factors (BR) 199–200
blue-green algae,
  photosynthesis 41–43
blue-light receptor,
  cryptochrome 1 (LF) 47
  photoreceptor (LF) 85
brassinosteroids,
  biosynthesis and function 137–143
breadmaking,
  wheat storage proteins 292–297
bundle sheath,
  PEP carboxylase 230–237

C

C_4 photosynthesis,
  PEP carboxylase 230–237
calcium,
  α-amylase activity 255–261
  compartmentation and signal transduction pathways 214–222
  cytoskeleton-based motor proteins 86–91
  ion channels activation 244–246
  phospholipase D activation 261–266
  stomatal movements 339–345
  stress response 121–122
  tip growth in pollen tubes 79–80
calmodulin,
  calcium response 121–122
  production of activated oxygen species (LF) 207
cambial activity 448–449
cAMP,
  signalling in fungal pathogens 193–199
companion cells,
  phloem loading 285–286
carbon oxidation cycle,
  photorespiration and photoinhibition 119–121
carotenoids,
  ABA biosynthetic pathway (LF) 332
catalytic domain phospholipase D 261–266
cell cycle,
  cytokinin and auxin 351–356
  lateral roots 390–396
  microspore culture 297–302
  retinoblastoma protein 82–84
cell death,
  hypersensitive response 162–165
cell division,
  microtubule-organizing centres 223–230
  polarity in *Fucus* 15–21
  root development 1–2
cell elongation,
  actin and profilin 275–281
  brassinosteroids 137–143
cell fate,
  lateral roots 390–396
  meristem development 325–327
  pollen culture 297–302
  xylem differentiation 333–338
cell proliferation,
  CLAVATA1 and meristems 325–327
cell signalling,
  lipochitin oligosaccharides 111–115
cell walls,
  analysis (BR) 37
  polarity in *Fucus* 15–21
centrosomes,
  microtubule-organizing centres 223–230
chalcone synthase 373–378
channel regulation,

ion flux 244–246
chaperones 180–187
Chlamydomonas,
translation in chloroplasts 308–315
chlorophyll,
binding antenna protein 308–315
fluorescence imaging 316–320
photosynthesis (BR) 238
chloroplast,
compartmentation and signal transduction pathways 214–222
galactolipid biosynthesis 161–162
reverse genetics 419–425
RNA editing 5–6
thylakoid membrane proteins 431–437
transcription and translation 308–315
tubular connections 405–406
chromatic adaptation,
cyanobacteria 41–43
chromosome translocations 470–476
circadian rhythms,
elf3 mutants (LF) 46
co-suppression,
transgenes and endogenous genes 438–443
comparative mapping,
polyploid analysis 470–476
compartmentation,
auxin-binding protein 251–255
detoxification of xenobiotics 144–151
compound leaves 396–402
cotyledons,
sucrose metabolism 169–174
Crassulacean acid metabolism 230–237
crop management,
rice research (BR) 322–323
crown gall (BR) 321–322
cuticles (BR) 201
cutin biosynthesis,
lipid-transfer proteins 66–70
cyanobacteria,
photosynthesis 41–43
cyclic AMP,
pathogen development 366–368
cyclic GMP 214–222
cytochrome P-450,
xenobiotics 144–151
cytokinin response,
in mosses 99–105
interaction with auxin 351–356
cytoplasmic streaming 29–37
cytoskeleton,
microtubules 223–230
myosin 29–37
pollen-tube growth 86–91
profilin 275–281
wood structure 3–4
xylem formation 333–338
cytotoxins and cell ablation 106–111

D

Datura ferox,
seed germination 464–469
defence,
calmodulin, calcium and activated oxygen (LF) 207
compartmentation and signal transduction 214–222
DIBOA biosynthesis 449–450
hypersensitive response 266–274
jasmonic acid 302–307
MAP kinase cascades 406–408
methyl salicylate (LF) 166
pathogen avirulence 452–458
pathogenicity genes 204–206
pathogens and cAMP 366–368
protease inhibitors 379–384
salicylic acid 162–165
desert plants (BR) 320–321
desiccation tolerance 384–389
determination,
xylem differentiation 333–338
development,
ABA and seeds 447–448
a role for cAMP in fungi 193–199
biophysics of leaf organogenesis 365–366
cell ablation techniques 106–111
CLAVATA1 and cell proliferation 325–327
ethylene as a regulator of cortical cell divisions 203–204
flower asymmetry (LF) 6–7
genetics of flowering induction 412–418
hypermethylation of *SUPERMAN* (LF) 411
influence of cytokinins and auxin 351–356
intracellular signalling 246–247
jasmonic acid 302–307
lateral roots 390–396
leaf form 396–402
leaves 330–331
mosses as model systems 99–105
oil bodies in root tissue (LF) 369
organogenesis 327–328
polarity in *Fucus* 15–21
pollen culture 297–302
root meristems 1–2
sugar import in seeds 169–174
tracheary-element differentiation 333–338
unisexual flowers 130–136
DIBOA biosynthesis 449–450
dioxygenase,
cell-death programmes (LF) 248
DNA,
mitochondrial genomes 477–483
replication 82–84
dormancy 384–389
dynein 29–37

E

economics and rice research (BR) 322–323
education,
plant physiology (BR) 444–445
electrophysiology,
K^+ channels 339–345
embryogenesis,
microspore culture 297–302
polarity in *Fucus* 15–21
endo-β-mannanase,
seed dormancy 464–469
endoduplication,
retinoblastoma protein 82–84
endoplasmic reticulum,
70 kDa stress-related proteins 180–187
retention mechanisms 251–255
endosperm weakening,
germination and endo-β-mannanase 464–469
endosymbiosis,
defective mutants 371–372
galactolipid biosynthesis 161–162
environmental sensing,
intracellular signalling 246–247
jasmonic acid 302–307
environmental stress,
physiological response (BR) 362–363
enzymes,
α-amylase activity 255–261
α-galactosidase and endo-β-mannanase 464–469
amino acid biosynthesis 346–351
glucosinolate–myrosinase system 425–431
phospholipase D 261–266
polyketide synthases 373–378
structural studies 368–369
epicuticular waxes (BR) 201
ethylene,
MAP kinases 11–15
nodulation in *Medicago* 203–204
wound response (LF) 84
evolution,
chlorophyll-binding proteins (LF) 123
gene families in pine 356–359
palaeobotany (BR) 484–485
plant–animal mutualism 408–409
polyketide synthases 373–378
polyploidy in angiosperms 470–476
expansins,
biophysics of leaf development 365–366

F

F-actin 275–281
ferns,
sex determination 175–180
ferretin 187–193
ferrous iron transport 187–193
fiddlehead mutants,
pollen hydration 328–329
flavones,
antioxidant properties 152–159
flavonols,
bronze-2 mutation 8–9
free-radical scavenging 7–8
lipid peroxidation 8–9
flower development,
agamous gene (LF) 46
cell ablation 106–111
flowering,
elf3 mutants (LF) 46
hermaphrodites and unisexual flowers 130–136
induction in pea 412–418
meristem development 325–327
meristem identity (LF) 166

meristem identity genes (LF) 85
fluorescence imaging 316–320
forest trees (BR) 240
Fucus 15–21
fungal elicitors,
activation of MAP kinase cascades 406–408
fungal virulence 193–199
fungi,
monitoring releases (BR) 322
fusicoccin
14-3-3 proteins 60–66
plasma membrane H^+-ATPase 60–66

G

G proteins,
a role for cAMP in fungi 193–199
galactolipids,
biosynthesis genes 161–162
gene expression,
jasmonate-induced 302–307
transcription and translation 308–315
gene silencing,
genetic engineering 286–288
transgenic plants 409–411
viral induced 409–411
gene transcription,
sugar-responsive genes 208–214
gene transfer,
Agrobacterium (BR) 321–322
gene-for-gene hypothesis 452–458
genetic ablation 106–111
genetic engineering,
commercial products (BR) 116–117
DIBOA biosynthesis for defence 449–450
laboratory manual (BR) 283
stress tolerance 48–54
sulphur-containing amino acids 330–331
wheat glutens 292–297
genetics,
analysis of polyploids 470–476
analysis of root development 390–396
CLAVATA1 and meristems 325–327
flower induction in pea 412–418
gene families in pine 356–359
leaf development 396–402
maize mutant analysis (BR) 486–487
mitochondrial genomes 477–483
plastid genome 419–425
post-transcriptional gene silencing 438–443
retrotransposons in maize genome (LF) 7
genome,
analysis (BR) 238–239
gene families in pine 356–359
organization of mitochondrial DNA 477–483
protein structural studies 368–369
sequencing 71–74
genomic *in situ* hybidization 470–476
germination,
α-amylase activity 255–261
endo-β-mannanase 464–469
influence of nitrogen oxides (LF) 288
GFP,
tubular connections between chloroplasts 405–406
gibberellin,
α-amylase expression 255–261
accumulation of replication protein (LF) 411
root development (LF) 369
seed germination 464–469
Glomus versiforme,
arbuscular mycorrhiza 54–60
glucose repression 208–214
glucosinolates 425–431
glucosyl transferase,
detoxification of xenobiotics 144–151
glucosylation,
cytokinin pools 351–356
glutathione,
conjugation of xenobiotics 144–151
glutens,
seed storage proteins 292–297
glycolipid,
signals 111–115
glycosylation,
auxin-binding protein 251–255
grasses,
evolution, taxonomy and growth (BR) 201–202
gravity perception,
in mosses 99–105
GTP-binding proteins,
stomatal movement 339–345
GTPase,
nuclear import 458–464
guard cells,
K^+ channels 339–345

H

hemoglobin,
transgene expression (LF) 166
herbicides,
resistance (BR) 486–487
herbivory,
plant–animal mutualism 408–409
volicitin and beet armyworm (LF) 248
hermaphrodite gametophytes,
sex determination 175–180
heterospory in ferns 175–180
hexokinase,
sugar sensing 208–214
high molecular weight glutenins 292–297
homeotic genes,
flower development 130–136
hormones,
stress responses 22–28
Hsc70 proteins,
70 kDa stress-related proteins 180–187
hydrogen peroxide,
defence response 162–165
hydrolases,
germination and endo-β-mannanase 464–469
hydroxamic acids 449–450
hypersensitive response,
oxidative burst 162–165
pathogen avirulence 452–458
pathogen defence 266–274
Xanthomonas pathogenicity genes 204–206

I

importin α and β,
nuclear import of proteins 458–464
inflorescence mutants,
tassleseed2 of maize 130–136
initiation factors,
translation in chloroplasts 308–315
inositol 1,4,5-trisphosphate,
tip growth in pollen tubes 79–80
intercellular signalling 22–28
Internet,
science on the web (BR) 484
intracellular compartmentation 214–222
intracellular signalling,
cAMP and fungal pathogens 193–199
hexokinase 208–214
jasmonic acid 302–307
K^+ channels 339–345
MAP kinases 11–15
pathogens and cAMP 366–368
plastid signalling 81
phospholipase D activity 261–266
ion channels,
K^+ channel assembly (LF) 332
potassium transport 244–246
pyrophosphatase 9–10
stomatal movement 339–345
iron,
transport and storage 187–193
isothiocyanates,
glucosinolate–myrosinase system 425–431

J

jasmonic acid,
intracellular signalling 302–307
protease inhibitor production 379–384

K

K^+ channels,
stomatal movement 339–345
Kautsky effect,
fluorescence imaging 316–320
kinesin 29–37

L

lateral roots,
development 390–396
influence of cytokinins and auxin 351–356
leaf primordia 330–331
leaves,
simple or compound 396–402
lectins,
nodulation 92–98

legumes,
lectins and nodulation 92–98
leucine rich repeats,
pathogen avirulence 452–458
resistance genes 243–244
Xanthomonas pathogenicity genes 204–206
life cycle,
sex determination in ferns 175–180
light perception,
brassinosteroids and cell elongation 137–143
flower induction in pea 412–418
in mosses 99–105
signal transduction pathways 214–222
lignification,
xylem formation 333–338
lignin,
cinnamyl alcohol dehydrogenase 448–449
lipid biosynthesis,
galactolipids 161–162
lipid-transfer proteins 66–70
Lipochitin oligosaccharides,
nodulation 111–115
Rhizobium 92–98
lipoxygenase,
jasmonic acid 302–307

M

maize development (LF) 46
mannose,
germination and endo-β-mannanase 464–469
MAP kinase,
defence 406–408
signal transduction 11–15
meristem development,
asymmetric divisions 1–2
CLAVATA1 and cell proliferation 325–327
determination of lateral roots 390–396
flowering time gene *Constans* (LF) 85
leaf development 396–402
organogenesis in *Monophyllaea* 327–328
photo and hormonal control of flowering (LF) 166
response to expansin application 365–366
mesophyll cell,
PEP carboxylase 230–237
metabolism,
compartmentation and signal transduction pathways 214–222
genetic engineering 286–288
germination and α-amylase activity 255–261
glucosinolates 425–431
hydroxamic acids 449–450
iron transport and storage 187–193
leaves 330–331
mitochondrial respiratory chain 289–290
phospholipase D 261–266
shikimate pathway 346–351
sugar import in seeds 169–174
xenobiotic detoxification 290–291
metal accumulation 451
methyl jasmonate,
environmental sensing 302–307
methyl salicylate,
defence response (LF) 166
hypersensitive response 266–274
methyl transferases,
phenolic compounds 249–250
methylation,
flower development (LF) 411
microspore culture 297–302
microtubules,
cytoskeleton-based motor proteins 86–91
motors 29–37
organizing centres 223–230
mineral nutrition,
iron transport and storage 187–193
mitochondria,
cytochrome c oxidase 289–290
genomes 477–483
RNA editing 5–6
mitosis,
microtubule-organizing centres 223–230
Mlo gene,
pathogen defence (LF) 207
resistance to pathogens 243–244
molecular biology,
laboratory manual (BR) 283
molecular chaperones,
70 kDa stress-related proteins 180–187
Monophyllaea,
organogenesis 327–328
morphogenesis,
guard cell differentiation 330–331
leaf development 396–402
mosses,
model systems 99–105
mutant analysis,
maize photolibrary (BR) 486–487
mutualism 408–409
mycorrhizal symbioses (BR) 282–283
myosin 29–37

N

Neurospora,
gene silencing 438–443
nitric oxide,
cytochrome c oxidase 289–290
nitrogen fixation 167–168
nitrogen oxides,
seed germination (LF) 288
nodulation,
ethylene as a regulator 203–204
interaction with cytokinins and auxin 351–356
lectins 92–98
symbiosis-defective mutants 371–372
nodulins 167–168
nuclear import,
nuclear-localization sequences 458–464
Xanthomonas pathogenicity genes 204–206
nutrition,
arbuscular mycorrhiza 54–60

O

octadecanoic pathway,
intracellular signalling 302–307
oligosaccharides,
biological activity 111–115
organelle movement,
cytoskeleton-based motor proteins 86–91
organogenesis,
biophysics of leaf formation 365–366
determination in *Monophyllaea* 327–328
meristem development 325–327
oxidative stress (BR) 403

P

palaeobotany,
plant evolution (BR) 484–485
pathogen resistance,
Mlo gene (LF) 207
pathogens,
defence and MAP kinase cascades 406–408
grass diseases (BR) 362
monitoring releases of fungi (BR) 322
pathogenesis related proteins 266–274, 452–458
Phytophthora diseases (BR) 323
requirement for cyclic AMP 365–366
resistance genes 243–244
targeting of protein signals 204–206
pattern formation,
response to expansin application 365–366
pea,
genetics of flowering 412–418
peloric flowers,
cycloidea (LF) 6–7
PEP carboxylase 230–237
peptidase,
thylakoid protein import 431–437
pH effects on PEP carboxylase 230–237
phalloidin,
actin staining 275–281
phenolic compounds,
antioxidants 152–159
phenylpropanoids,
methyl transferase superfamily 249–250
polyketide synthases 373–378
shikimate pathway 346–351
phloem loading 285–286
phosphatases,
calcium signalling 121–122
phosphate uptake,
arbuscular mycorrhiza 54–60
phospholipase D 261–266
phospholipids,
phospholipase D activity 261–266

phosphorylation,
calcium response 121–122
ion-channel gating 339–345
MAP kinase cascades 406–408
Opaque2 (LF) 123
PEP carboxylase 230–237
structure of LHCII (LF) 332
sugar sensing 208–214
photoinhibition,
photorespiration 119–121
photomorphogenesis,
brassinosteroids 137–143
compartmentation and signal transduction 214–222
flower induction in pea 412–418
nuclear import of proteins 458–464
photophysiology,
light perception (BR) 74–75
photoreceptor,
cryptochrome 1 (LF) 47
blue-light perception (LF) 85
phytochrome B (LF) 47
photosynthesis,
chlorophyll-binding proteins (LF) 123
fluorescence imaging 316–320
light reactions (BR) 238
light-harvesting complex II (LF) 332
PEP carboxylase 230–237
photoinhibition 119–121
photosystem II complex 431–437
reverse genetics in chloroplasts 419–425
transcription and translation in chloroplasts 308–315
web sites 444
phragmoplast,
cell division 223–230
cytoskeletal motors 29–37
phyllotaxis,
response to expansin application 365–366
physiology,
leaves 330–331
popular science (BR) 444–445
stress responses (BR) 362–363
phytochemistry,
toxicology of plant extracts (BR) 241
phytochrome,
compartmentation and signal transduction pathways 214–222
cyanobacteria 41–43
flower induction in pea 412–418
nuclear localization (LF) 47
phytohormones,
ABA and seed development 447–448
brassinosteroids 137–143
compartmentation and signal transduction pathways 214–222
cytokinin and auxin 351–356
polyamine biosynthetic pathways 124–130
stress responses 22–28
Phytophthora diseases (BR) 323
phytoremediation technologies 451
plant breeding,
flowering (BR) 485–486
wild relatives of rice (LF) 47
plant structure (BR) 200
plant–microbe interactions,
cAMP and fungal pathogens 193–199
legumes 199–200
two-component systems 81
plasma membrane H^+-ATPase,
14-3-3 proteins 60–66
activation 43–45
fusicoccin 60–66
plasma membrane pyrophosphatase 9–10
plasmodesmata,
phloem loading 285–286
plastid,
connections between chloroplasts 405–406
promoters (LF) 207
protein import into membranes 431–437
RNA editing 5–6
targeted inactivation of genes 419–425
transcription and translation 308–315
polarity,
cell division 15–21
pollen,
development and microspore culture 297–302
hydration aquaporins 328–329
pollen tubes,
cytoskeletal components 86–91
cytoskeleton 29–37
tip growth 79–80
pollination,
signalling mechanisms 81
pollution,
plant responses (BR) 117
polyamines,
biosynthetic pathways 124–130
polyketide synthase 373–378
polyploidy,
in angiosperms 470–476
post-transcriptional gene silencing 438–443
post-transcriptional regulation,
α-amylase multigene family 255–261
post-translational modification,
MAP kinase cascades 406–408
potassium,
channel assembly (LF) 332
transport 244–246
potato virus X 409–411
predation,
protease inhibitors 379–384
preprophase band,
cell division 223–230
primary metabolism,
amino acid biosynthesis 346–351
profilin,
actin depolymerization 275–281
programmed cell death,
Lls1 gene of maize (LF) 248
protease inhibitors 379–384
protein folding,
70 kDa stress-related proteins 180–187
protein import,
thylakoid-membrane proteins 431–437
protein kinase,
calcium signalling 121–122
MAP kinases 11–15
protein self-assembly,
chaperones 180–187
protein trafficking,
tubular connections between chloroplasts 405–406
proteins,
structural studies 368–369
proton pumping 43–45
pulsed-field gel electrophoresis 477–483
pyrophosphatase,
energetics of transport 9–10

Q

quiescence 384–389
quinone acceptor,
photorespiration and photoinhibition 119–121

R

Ran,
nuclear import 458–464
reactive oxygen species,
alternative oxidase 289–290
hypersensitive response 266–274
pathogen avirulence 452–458
stress (BR) 403
replication models,
mitochondrial DNA 477–483
resistance,
genetic engineering 286–288
hypersensitive response 266–274
pathogen avirulence 452–458
transmembrane receptors 243–244
volicitin and herbivores (LF) 248
retinoblastoma protein,
cell proliferation 82–84
retrotransposons,
complex genes in pine 356–359
maize genome (LF) 7
RFLP analysis of polyploids 470–476
Rhizobium,
ethylene as a regulator of infection 203–204
lectins and nodulation 92–98
rice,
gibberellin and elongation growth (LF) 411
hybrids with wild relatives (LF) 47
research (BR) 322–323
RNA,
editing in plastids 5–6
transcription and translation in chloroplasts 308–315
transgenes and endogenous genes 438–443
root development,
arbuscular mycorrhiza 54–60
cell determination 390–396
cellular differentiation (LF) 369
ethylene as a regulator 203–204
meristem development 1–2
Root-to-shoot signalling 22–28

Rubisco,
photoinhibition 119–121

S
S-locus,
pollen–stigma interactions 328–329
salicylic acid,
cell death 162–165
pathogen defence 266–274
scutellum concept 255–261
second messengers 214–222
secretion,
auxin-binding protein 251–255
seed development,
ABA and development 447–448
dormancy 384–389
germination 464–469
storage proteins 292–297
sugar import 169–174
self-incompatibility,
pollen–stigma interactions 328–329
sequencing technology 71–74
sex determination
genetic pathways 124–130
in ferns 175–180
sexual reproduction,
breeding systems (BR) 485–486
fungi and cAMP 366–368
pollen culture 297–302
pollen–stigma interactions 328–329
shikimate pathway 346–351
Shine–Dalgarno-like element 308–315
sigma factor,
transcription in chloroplasts 308–315
signal peptides,
thylakoid protein import 431–437
signal transduction,
actin polymerization 275–281
crosstalk 246–247
fungal pathogens 193–199
pathogen defence 452–458
processes (BR) 281–282
sugar sensing 208–214
silencing,
polyploids 470–476
transgenes and endogenous genes 438–443
simple leaves 396–402
somoclonal variation (BR) 38
spermidine biosynthesis 124–130
spore germination in mosses 99–105
sterols,
brassinosteroids 137–143
stilbene synthase 373–378
stomata,
fusicoccin 60–66
K^+ channels 339–345
Streptocarpus,
organogenesis 327–328
stress,
ABA response 48–54
annexins and reactive oxygen (LF) 6
anthocyanins and free-radical scavenging 7–8
effect on the shikimate pathway 346–351
fluorescence imaging 316–320
gene tolerance (BR) 239–240
MAP kinases 11–15
microspore culture 297–302
response to water deficit 48–54
stress-related proteins,
chaperones 180–187
sucrose,
metabolism in seeds 169–174
transport and phloem loading 285–286
sugar,
import 169–174
metabolism 208–214
sulphur metabolism 425–431
superoxide synthesis,
defence response 162–165
symbiosis,
arbuscular mycorrhiza 54–60
ectomycorrhizas 2–3
mycorrhizal fungi (BR) 282–283
nodulation and the *sickle* mutant 203–204
rhizobia and mycorrhiza 371–372
symmetry,
development of lateral roots 390–396
systematics,
plant names (BR) 402–403
systemic acquired resistance,
salicylic acid 266–274
systemic wound signals 379–384

T
Taiwanese research 360–362
targeted inactivation of genes 419–425
targeting,
nuclear localization sequence 458–464
protein import into membranes 431–437
taxonomy,
plant names (BR) 402–403
tree identification guide (BR) 160
terpenoids,
compartmentation and signal transduction 214–222
thylakoid membrane proteins 431–437
tip growth,
cytoskeleton-based motor proteins 86–91
pollen tubes 79–80
tissue culture,
research in Taiwan 360–362
toll protein,
pathogen resistance 266–274
toxicology of plant extracts (BR) 241
tracheary element differentiation 333–338
trafficking of the auxin-binding protein 251–255
transcription,
α-amylase multigene family 255–261
activity of chloroplasts 308–315
auxin response elements (LF) 370
chloroplast genes 419–425
plastid promoters (LF) 207
regulation of protease inhibitors 379–384
sugar-responsive genes 208–214
transformation,
mosses 99–105
plastid genome 419–425
wheat storage proteins 292–297
translation,
activity of chloroplasts 308–315
transmembrane proteins,
aquaporins and osmotic flux (LF) 288
homologues of the ATP-binding cassette 290–291
ion channels 244–246
pathogen resistance 243–244
transport,
ferrous iron 187–193
glutathione *S*-conjugates 290–291
photoassimilates and sieve elements 285–286
tree–crop interactions and resource capture (BR) 75–76
trees,
identification of tropical species (BR) 160
in vitro culture (BR) 75
physiology 448–449
turfgrass diseases (BR) 362

U
unisexual flowers 130–136
uricase II,
nod-35 homologue 167–168

V
vacuole,
calcium channels 214–222
compartmentation and detoxification 144–151
transport of glutathione *S*-conjugates 290–291
vernalization and flowering in pea 412–418
viral avirulence 452–458
virulence,
fungal pathogens 193–199
viruses,
aphid transmission (LF) 123
gene silencing 409–411
resistance 409–411
vitamins,
antioxidant properties 152–159
viviparous mutants,
seed development 447–448
volatiles,
herbivore resistance (LF) 248
jasmonates 302–307
voltage activation,
ion channels 244–246
K^+ channels 339–345

W
wall architecture (BR) 37
water stress 48–54
water uptake,
aquaporins (LF) 370
wood research 3–4

World Wide Web,
sites for photosynthesis research 444
science on the web (BR) 484
wounding,
ethylene induction (LF) 84
jasmonate and ABA 302–307
MAP kinases 11–15
protease inhibitor production 379–384

X

xenobiotics,
ABC cassette transporters 290–291
detoxification 144–151
xerophytes,
desert plants (BR) 320–321
xylem,
formation 333–338
transport and phytohormone signalling 22–28

Y

Yucca and yucca–moth mutualism 408–409

Z

Zinnia elegans,
tracheary element differentiation 333–338

Index of Books Reviewed

A

Aducci, P., ed., *Signal Transduction in Plants* 281

B

Bajaj, Y.P.S., ed., *Somaclonal Variation in Crop Improvement II* 38

Bajaj, Y.P.S., ed., *Trees IV* 75

Bowes, B.G., *A Colour Atlas of Plant Structure* 200

Brett, C.T. and Waldron, K.W., *Physiology and Biochemistry of Plant Cell Walls* (2nd edn) 37

C

Chapman, G.P., *The Biology of Grasses* 201

Clark, M.S., ed., *Plant Molecular Biology – A Laboratory Manual* 283

Collins, G.B. and Shepherd, R.J., eds, *Engineering Plants for Commercial Products and Applications* 116

E

Erwin, D.C. and Ribeiro, O.K., *Phytophthora Diseases Worldwide* 323

Evenson, R.E., Herdt, R.W. and Hossain, M., eds, *Rice Research in Asia: Progress and Priorities* 322

G

Gibson, A.C., *Structure–Function Relations of Warm Desert Plants* 320

Grillo, S. and Leone, A., eds, *Physical Stresses in Plants: Genes and their Products for Tolerance* 239

Gustafson, J.P. and Flavell, R.B., eds, *Genomes of Plants and Animals* 238

H

Harborne, J.B. and Baxter, H., eds, *Dictionary of Plant Toxins* 241

I

Index Kewensis 2.0 (CD-ROM) 402

TECHNICAL TIPS ONLINE

Bags of free tips for molecular biologists

A unique online journal of peer-reviewed molecular biology techniques articles

http://www.elsevier.com/locate/tto
in Europe http://www.elsevier.nl/locate/tto

KEY FEATURES

- free to use
- coverage of: PCR, gene expression, cloning & sequencing, and much more
- discussion/feedback for all articles
- rapid publication
- **EMBASE/MEDLINE** abstracts
- information about products cited in articles
- new product information
